SPECIFIC— Tanks for Hot Dipping

25X1

Reference: 5 March

Col. P. J. Dixon has replied as follows to Headquarters' request for information on the tanks used by Javelin for Hot-Dipping Compounds:

"We have installed at Marsworth a hot dipping tank with full temperature control up to 170°C plus. If you will let us have information as to the dipping temperatures of the compounds you propose to use and information as to the maximum size of the article you will require to treat, we will let you know whether our tank is capable to handling your work should the occasion arise."
